                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptides AAW45983-W456025 are based on portions of somatostatin, somatostatin receptors (SSTR) and insulin-like growth factor binding proteins (IGFBP). They are capable of increasing weight gain, birth weight, growth rates, milk production, levels of circulating insulin, IGF-I and IGF-III, fibre production and muscle weight. They may be used to modulate carbohydrate metabolism and in treatment of diabetes. The oil carrier may be used for delivery of the peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New non-naturally occurring peptide(s) - which are based on portions of somatostatin, somatostatin receptors and insulin-like growth factor binding protein.

```
specification describes a method for targeting integration of refrences a method for targeting integration of refrontial second integration of Tyl-copia group to desired location on a chromosome. The method uses a modified integrase in a retrotransposon, where the modified integrase contains a coding sequence for a peptide portion which specifically binds to protein bound to the chromosome or to particular nucleic acid sequences on chromosome. The method is useful for targeting integration of a retrotransposon of the Tyl-copia group to a desired chromatin targeting of Tys is useful for targeting chromatin targeting of Tys is useful for tagging genes which are affected by aging and for studying oncogenes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a conserved Coxsackievirus A (serotype A16) VP1 epitope. The invention relates to a novel method for designing degenerate PCR primers (AAZ30975-Z31000, AAZ3261- AAZ3261) for amplifying target polynucleotides. This method comprises identifying uniquely conserved amino acid sequences (e.g, this epitope) in target proteins, synthesising degenerate polynucleotides encoding the conserved sequences; and substituting the synthesised polynucleotides with up to four predetermined nucleotides (e.g., inosine) at degenerate nucleotide positions. The nucleic acids comprise no more than 7 degenerate positions, have no more than 2 adjacent predetermined nucleotides and the
present sequence represents a mutated portion of an integrase. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Virus; epitope; target; degenerate; PCR; primer; amplification; VP1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nonstructural protein 2A, conserved, base analogue, inosine, predetermined nucleotide, diagnosis, enterovirus; poliovirus

                                                                                                                                                                                                                                                                                                                                         AAR37031-3 or an atriopeptin e.g. atriopeptin A or D, see AAR37337-8) having an activated carboxyl group capable of forming a betaglycosylamine linked glycoconjugate is reacted with an unprotected betaglycosylamine deriv. of an oligosaccharide. The deriv. is prepared by reacting an unprotected oligosaccharide having up to 9 saccharide units with saturated ammonium bicarbonate at pH 8.0-8.5. The N-linked glycoconjugate is produced under conditions to directly maintain the beta-anomeric configuration. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Targeting integration of retrotransposon or retrovirus into silent chromatin by transforming a cell with modified integrase having a coding sequence for a peptide portion that interacts with chromatin at desired
                                                                                                                                                                               N-linked peptide glyco-conjugate(s) prepn. - by reacting oligosaccharide(s) with ammonium bi:carbonate to maintain beta-anomeric configuration, and avoid sepn. of anomers.

predetermined nucleotides are 3 bases away from the 3' end of the synthesised strand. The degenerate primers are useful for amplifying target polynucleotides by the polywarease chain reaction (PCR). The use of the method of designing degenerate primers useful for the detection of polioviruses in clinical samples is described in USSSS477. The degenerate primers facilitate PCR amplification of unknown polynucleotides, where the amino acid sequence encoded is known. The primers also allow for the subsequent molecular based diagnosis with a serologically derived diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method of screening for a compound that modulates the binding of an oligosaccharide to a beta subunit of AMP kinase. The method comprises: (1) exposing a candidate compound to an oligosaccharide and a polypeptide comprising a beta subunit of AMP kinase, or its mutant and/or fragment that binds an oligosaccharide; and of the polypeptide to the candidate compound to modulate binding of the polypeptide to the oligosaccharide. An AMP kinase beta subunit oligosaccharide binding domain sequence has antidiabbetic, cycostatic, antiarteriosclerctic and anorectic activities, and can be used in gene therapy. The method is useful for screening for a compound that modulates the binding of an oligosaccharide to a beta subunit of AMP kinase for treating or preventing a condition associated with AMP kinase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening for a compound that modulates the binding of an oligosaccharide to a beta subunit of AMP kinase by assessing the ability of the candidate compound to modulate binding of the polypeptide to the oligosaccharide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    e.g., diabetes, atherosclerosis, obesity or cancer. The present sequence represents an N-terminal sequence from AMPK beta 1 (68-163) fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AMP kinase beta subunit oligosaccharide binding domain; AMP kinase; oligosaccharide binding domain; enzyme; antidiabetic; gene therapy; antiarteriosclerotic; anorectic; cytostatic; diabetes; atherosclerosis; obesity; cancer; fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-terminal sequence from AMPK beta 1 (68-163) fusion protein SEQ ID:31.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a hepatitis C virus peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel polypeptide encoded by an alternative
                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention describes an antibody which specifically recognises the human VPLF (vascular endothelial growth factor (VEGF)/plateletactive derived growth factor (PEGF)/plateletactive of this protein as growth factor. The antibody has vasotropic, vulnerary, nephrotropic, cardiant, antidiabetic, antiarteriosclerotic, antianaemic, osteopathic, anticheumatic, antiarthritic and antipsoriatic activities. The antibody is applicable in diagnostics and remedies for VPLF-participated diseases like arthritis, ischaemic diseases and retarded wound healing. The present sequence represents a human VPLF related peptide sequence, which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Etiological agent; autoimmune disease; systemic lupus erythematosus; SLE; Ro/SSA; immunoreactive; autoantibody; antigenicity; nucleocapsid;
                                                                                                                                                                                                                        Antibody specifically recognizing VPLF or its variant and inhibiting its activity, applicable in diagnostics and remedies for VPLF-participating diseases like arthritis, ischemic diseases and retarded wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determination of immunogenic agent in auto-immune disease - by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence sequence is provided in a specification relating to a novel vascular endothelial growth factor (VEGF)/platelet derived growth factor (PEGF)-like factor of 345 amino acids, or to a sequence in which at least one amino acid is deleted, replaced or added compared to the native sequence. The nucleotide sequence encoding the VEGF/PDGF-like factor may be integrated into a vector and used to transform a host cell. The VEGF/PDGF-like factor may be used in the development of agents for transform and the treating diseases associated with abnormal neovascularisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; VPLF; VEGF/PDGF-like factor; vascular endothelial growth factor; platelet-derived growth factor; antibody; inhibition; growth factor; vasotropic; varietiabetic; antianaemic; antianaemic; antianaemic; antianaemic; antianaemic; antipsorietic; osteopathic; antirheumatic; antiantic; antipsoriatic; arthritis; ischaemic disease; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New VEGF/PDGF-like factor useful for the development of treating agents for diseases accompanied by accentuation of abnormal neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                   Partial sequence contained in commercially available plasmid pMbac.
                                                                                                                                         VEGF/PDGF-like factor; vascular endothelial growth factor; VEGF; platelet derived growth factor; PDGF; neovascularisation; disease.

The invention relates to methods to determine the etiological agent of autoimmune diseases such as systemic lupus erythematosus (SLB). A common antigen for SLE and closely related disorders is the 60 kD protein-RNA particle: Ro/SSA, present in all calls studied to date. Staphylococcus VB protease digestion of this protein reveals bands of 51, 40, 35, 28 and 13 kD which are strongly immunoreactive with SLE autoantibodies. From the 13 kD band, peptide AAWA-911 demonstrated maximal antigenicity against anti-Ro/SSA autoantibodies beptides immunoreactive with SLE autoantibodies can then be used to screen for other peptides reactive with the antibodies. An example of such a peptide is the sequence presented here which is derived from the nucleocapsid protein of the Indiana serotype of the vesicular stomatitis virus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence sequence is provided in a specification relating to a novel vascular endothelial growth factor (VEGF)/platelet derived growth factor (PDGF)-like factor of 34s amino acids, or to a sequence in which at least one amino acid is deleted, replaced or added compared to the native sequence. The nucleotide sequence encoding the VEGF/PDGF-like factor may be integrated into a vector and used to transform a host cell. The VEGF/PDGF-like factor may be used in the development of agents for treating diseases associated with abnormal neovascularisation. The PDFSSRT SEGENT SEGEN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an antibody which specifically recognises the human VPLF (vascular endothelial growth factor (VBGF)/plateletderived growth factor (PDGF-like factor) protein, and inhibits the activity of this protein as a growth factor. The antibody has vasotropic, vulnerary, nephrotropic, cardiant, antidiabetic, antiarteriosclerotic, antianaemic, osteopathic, antirheumatic, antiarthritic and antipsoriatic activities. The antibody is applicable in diagnostics and remedies for VPLF-participated diseases like arthritis, ischaemic diseases and retarded wound healing. The present sequence represents a human VPLF related peptide sequence, which is used in an example from the present
                                                                                                                                                                                                                                                                                                                    Human, VPLF; VBGF/PDGF-like factor; vascular endothelial growth factor; platelet-derived growth factor; antibody; inhibition; growth factor; assorropic; valnerary; nephrotropic; cardiant; antidiabetic; antianaemic; antiarteriosclerotic; octeopathic; antirheumatic; antiarthritic; antipsoriatic; arthritis; ischaemic disease; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibody specifically recognizing VPLF or its variant and inhibiting its activity, applicable in diagnostics and remedies for VPLF-participating diseases like arthritis, ischemic diseases and retarded wound healing.

GENERAL INFORMATION:

APPLICANT: VOYLES, Daniel F.

APPLICANT: Gai, Xiaowu

TITLE OF INVENTION: Transposable Element Protein that Directs DNA

TITLE OF INVENTION: Integration to Specific Chromosomal Sites

TITLE OF INVENTION: Integration to Specific Chromosomal Sites

TITLE OF INVENTION: Integration to Specific Chromosomal Sites

CURRENT APPLICATION NUMBER: US/09/232,446B

CURRENT APPLICATION NUMBER: US 60/071,383

PRIOR APPLICATION NUMBER: US 60/071,383

NUMBER OF SEQ ID NOS: 26

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 24

LENGTH: 6

Patent No. 5256766
GENERAL INFORMATION:
APPLICANT: COUGHLIN, SHAUN R.
TITLE OF INVENTION: PHARMACEUTICALS
NUMBER OF INVENTION: PHARMACEUTICALS
NUMBER OF SHOUGHCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: IRELL & MANELLA
STREET: 545 MIDDLEFIELD ROAD, SUITE 200
CITY: MEMIO PARK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 2; Length 7;
                                                                                                                                                                                                                                                                                            COMPUTER REALABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
SOFTWARE: Patentin Release #1.0, Version #1.30

Lailess (tll) protein - fruit fly (Drosophila melanogaster)
NyAlternate names: steroid hormone receptor homolog tll; transcription factor tll
Cispecies: Drosophila melanogaster
Cispecies: Drosophila melanogaster
Cipate: 21-Sep-1990 #sequence_revision 21-Sep-1990 #text_change 09-Jul-2004
CiAccession: A35602; A47265
Ripinoni, F.; Baldarelli, R.M.; Steingrimsson, E.; Diaz, R.J.; Patapoutian, A.; Merriam A;File: The Drosophila gene tailless is expressed at the embryonic termini and is a mem A;Reference number: A35602; MUID:90304905; PMID:2364433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Superfamily: unassigned erbA-related proteins; erbA transforming protein homology; Keywords: DNA binding; steroid hormone receptor; transcription regulation; zinc finger; 32-341/Domain: erbA transforming protein homology <ERBA>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Status: preliminary; translated from GB/EMBL/DDBJ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nypotherical protein UL88 - human cytomegalovirus (strain AD169)
C;Species: human cytomegalovirus, human herpesvirus 5
A;Note: host Homo sapiens (man)
C;Accession: 509852
E;Accession: 509862
E;Accession: 50
A;Residues: 1-286 <hr/>
A;Crose-references: UNIPROT:Q47791; EMBL:X96977; NID:g1279406; PIDN:CAA65667.1; PID:g127
A;Experimental source: strain OGIX
A;Experimental source: strain OGIX
A;Note: the nucleotide sequence was submitted to the EMBL Data Library, February 1996
C;Genetics: A;Geneme: plasmid pADI
C;Superfamily: probable pheromone-responsive protein
F:1-26/Domain: signal sequence #status predicted <SIG>F;27-286/Product: hypothetical protein 8 #status predicted <MAT>

A.Title: The genome sequence of the facultative intracellular pathogen Brucella melitens A. Reference number: AD3252; PMID:1175688
A. Accession: AF319
A. Status: preliminary
A. Molecule type: DNA
A. Residues: 1-117 < KUR>
A. Residues: 1-117 < KUR>
A. Experimental source: strain 16M
C. Genetics: BME10540.
A. Map position: I

(LIPP/) LIPPS B V. (LIPP/) LIPPS F W.

Lipps FW, Lipps BV; WPI; 1998-271108/24. Lethal Toxin Neutralising Factor peptide from opossum - can neutralise venom(s) from all major families of poisonous snakes.

Claim 7; Col 11; 11pp; English.

This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kDa anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Elapidae, viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of bee or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMT) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (ISE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and triabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthitis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, databates or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                 ö
snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (1gE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (AbA). In particular, the methods of the invention are useful for diagnosing and tracular, the methods of the invention are useful for diagnosing and abbetes, autoimmune disease (a.g. erythematosus (SLE), rheumatoid arthitis, Sjogren's syndrome, Reiter's syndrome, Graves' disease. Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva callection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; IGE; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; ADA; asthma; diabetes; autoimmune disease; systemic lupus erythematosus; SLE; rheumatoid arthritis; Sjogren's syndrome; Reiter's syndrome; Graves' disease; Addison's disease; Hodgkin's disease; depression;

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), insulin, myoglobin and/or adenosine deaminase (AbA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, atthritis, Sjogren's syndrome, Reiter's syndrome of season or hedgin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection of serum. Saliva can be centrifiged immediately, whereas blood requires

```
The present sequence is from the N-terminus of a 68 kD protein purified from the serum of the opossum Didelphis virginiana. The full-length protein is a lethal toxin neutralising factor (LTNF). The use of purified LTNF or of the chemically synthesised 15mer N-terminal peptide for treating victims of bee stings, scorpion stings and bacterial or plant toxins is claimed. The patent disclosure does not provide any evidence for neutralising activity against these various toxins. There is evidence of significant neutralising activity to the opossum LTNF and the 15mer peptide against venom from snakes of the families Crotalidae, Blaphidae, Hydrolidae and Viperidae. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treatment of victims of bee or scorpion stings or plant or bacterial toxins - by admin. of lethal toxin-neutralising factor or its N-terminal

```
The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin & (IgE), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthitis, Sjogren's syndrome, Reiter's syndrome, Graves' disease. Addisease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva con tentifugation to separate serum. Saliva proteins collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins can be assayed by a simple ELISA test, whereas an assay of proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; IgB; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; AbA; asthma; diabetes; autoimmune disease; systemic lugus erythematosus; SLE; rheumatoid arthritis; Sjogren's syndrome; Reiter's syndrome; Graves' disease; Addison's disease; Hodgkin's disease; depression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kba anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Blapidee, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of bee or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity
                                                              LTNF; lethal toxin neutralising factor; opossum; envenomation; therapy, anti-haemorrhagic protein; Elapidae; Viperidae; sea snake; snake bite; sepsis; allergy; bee sting; scorpion sting; plant toxin; bacterial toxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; IgE; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; AbA; asthma; diabetes; autoimmune disease; systemic lupus erythematosus; SLE; rheumatoid arthritis; Sjogrem's syndrome; Reiter's syndrome; Grayes' disease; Addison's disease; Hodgkin's disease; depression;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Lethal Toxin Neutralising Factor peptide from opossum - can neutralise venom(s) from all major families of poisonous snakes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                  The sequences given in ABB80222-28 represent lethal toxin neutralising factor (ITME) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin & (IGE), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IGE levele, a sthma, diabetes, autoimmune disease (-g. erythematosus (SLE), rheumatoid arthritis, Sjogran's syndrome, Reiter's syndrome, Graves' disease, data and a serial and arthritis, Sjogran's syndrome, Reiter's syndrome, Graves' disease, the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (1gE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, Addisease or Hödgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva callection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, cytokine, cell proliferation, cell differentiation, gene therapy, vaccine, peptide therapy, stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia, nervous system disorders; arthitis; inflammation.

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cycostatic; immunosuppressive; nootropic, neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Breast and ovarian cancer associated antigen protein sequence SEQ ID 720.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; breast cancer; ovarian cancer; cytostatic; immunosuppressive; nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; immune disorder; Addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; cardiovascular disorder; wound healing; neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, nemantopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                        Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila, developmental biology; cell signalling; insecticide;

antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anamia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatorid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide acquences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid, an antibody specific for a TAT polypeptide; a peptide or organic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumour-associated antigenic target (TAT) polypeptide PRO83096, SEQ:5611.

Specifically, it refers to methods for preparing these complexes comprising at least two component proteins, as well as screening methods to identify modulators of the pathway, which include antibodies, agonists and antagonists thereof. The present invention describes a protein complex and kit that are useful for diagnosing, prognosing or treating chronic inflammatory diseases such as
                                                         antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, luga cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, ovarian cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New protein complex comprising at least one first and second protein of
the Tumor Necrosis Factor-alpha (TNF-alpha) -signaling pathway, useful for
diagnosing or treating inflammation, neurological diseases, infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human protein of a TNF-alpha signalling pathway protein complex Seq 183.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein complex; tumour necrosis factor-alpha signalling pathway; TNF-alpha; chronic inflammatory disease; rheumatoid arthritis; inflammatory bowel disease; infectious disease; septic shock; bacterial infection; neurological disease; stroke-induced inflammation; neurodegenerative disease; cancer; antiinflammatory; antiarthritic; antirheumatic; cytostatic; antibacterial; gene therapy; human.
molecule which binds to a TAT polypeptide; fusion proteins comprising TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,

             rheumatoid arthritis and inflammatory bowel disease; infectious diseases such as septic shock and bacterial infections; neurological diseases such as stroke-induced inflammation in neurons; neurodegenerative diseases and cancer. Accordingly, these complexes can be used for the development of pharmaceutical compositions that exhibit antiinflammatory, antiarthritic, antirhematic, cytostaric and antibacterial activities and can be used for gene therapy purposes. In particular, the invention further provides siRNA-oligonucleotides useful for inhibiting protein expression for in vitro or cell culture assays. This polypeptide is a human protein that can be used in combination with other proteins provided in the specification to form novel complexes of the TNF-alpha signalling pathway
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis.

ANK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
cuplynucleotides may be used to produce the secreted (I), by inscrting the
nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-derived cells. AK64703
cancers and cancer metastases of haematopoietic-derived cells. AK64703
to AAK89694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK64942 to AAK8950 and AAM82169
represent sequences used in the exemplification of the present invention Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis. Claim 11; SEQ ID NO 13485; 3071pp + Sequence Listing; English.
